

GABE MEDNICK

Background and evolving interests in data science and machine learning

As a PhD candidate, I maintained a broad interdisciplinary approach that included microbiology, molecular biology, biochemistry and physical chemistry with lots of spectroscopy. In my postdoctorate, my love for learning and teaching biology and chemistry was nurtured. At my first research position with a start-up, I was introduced to bioinformatics (command line tools, python and R) for processing data generated by nanopore sequencing. In the process, of learning how to analyze my sequencing data, I discovered data science and became a passionate convert.
